TGS-2024043854 · DAY 2 · LAB 4 · 50 MIN

Multi-Agent Video Studio — Kanban, Production & Human Review

Build a Human-AI Workforce with Autonomous AI Agents · Multi-agent (ordered pipeline) · LO2

> Coordinate five distinct Hermes profiles on a Kanban board to create a local 15-second video and a reviewed release package.

The business scenario

Use the verified Day 1 launch-office evidence. The team must turn one approved campaign angle into a short video while making ownership, dependencies, review and the human release gate visible.

You will deliver

- outputs/lab04/research.md and storyboard.md
- outputs/lab04/video/final.mp4 — playable 15-second 1080x1920 local video
- outputs/lab04/audit-report.md and release-package.md
- Real Kanban task/profile state with dependency and blocked human-release gate for PP Q2

Agents: Five distinct Hermes profiles: researcher, scriptwriter, producer, auditor and publisher; publisher packages locally only
You (the human): Approve storyboard, watch the actual video, request a correction and decide whether the exact version is accepted
Goal: Orchestrate a multi-agent team with role specialisation, dependencies and a human approval gate, and correlate the team design with quality, cost and speed (LO2).

Before you start

- Trainer preflights five distinct Hermes profiles, model access and the gateway before Day 2; learners inspect and run them, rather than spending the 50-minute unit installing everything
- Day 1 launch office pack; supplied brand assets and local render_launch_video.py
- Python + Pillow, ffmpeg and ffprobe are installed and tested

Lab files (data/)

File	What it is
`AGENTS.md`	Company context Hermes loads automatically
`brand-guide.md`	Brand voice, colours, platform formats

campaign-brief.md	Gula Melaka Cold Brew campaign brief (offer, KPIs, timeline)
compliance-rules.md	C1–C10 brand-safety and escalation rules
product-catalogue.csv	12 products and prices
templates/video-brief-template.md	Template
video-qa-checklist.md	V1–V9 video QA checks
skills/brand-compliance-audit/SKILL.md	Agent skill (SKILL.md)
DESIGN.md	Visual identity for HyperFrames
souls/researcher.SOUL.md	Role + rules for one studio profile
souls/scriptwriter.SOUL.md	Role + rules for one studio profile
souls/producer.SOUL.md	Role + rules for one studio profile
souls/auditor.SOUL.md	Role + rules for one studio profile
souls/publisher.SOUL.md	Role + rules for one studio profile
tasks/t1-research.md	Task brief (used with --body-file)
tasks/t2-script.md	Task brief (used with --body-file)
tasks/t3-produce.md	Task brief (used with --body-file)
tasks/t4-audit.md	Task brief (used with --body-file)
tasks/t5-package.md	Task brief (used with --body-file)
tasks/t6-post.md	Task brief (used with --body-file)
assets/brand-palette.png	Brand image asset
assets/cold-brew-product-card.png	Brand image asset
assets/kopi-kaki-logo.png	Brand image asset
skills/launch-video/SKILL.md	Agent skill (SKILL.md)
tools/render_launch_video.py	

All company data in this lab (Kopi Kaki Co., people, reviews, comments, metrics, competitors) is fictional and generated for training.

Steps

1. Inspect the preflighted studio (5 min)

Copy this lab's tools and skills into the same workspace without overwriting AGENTS.md. The trainer has prepared the distinct profiles and provider access. If that preflight is missing, record setup time and complete the core run under trainer guidance; do not claim a role-play is a real team.

TERMINAL

```
hermes --version
hermes profile --help
hermes kanban --help
hermes gateway status
ffmpeg -version
ffprobe -version
```

✓ Expected: The learner can inspect actual profile/task state; gateway and renderer are available.

2. Create or inspect the actual Kanban contracts (10 min)

PROMPT — PASTE INTO HERMES LEAD CHAT IN ~/KOPI-KAKI

```
Inspect current Hermes profile and Kanban help. Use distinct profiles researcher, scriptwriter,
producer, auditor and publisher. Create or inspect a real launch-video board: research ->
storyboard -> human storyboard review -> render -> independent audit -> human release gate ->
local package. Each task needs one owner, source input, unique output path and done criteria. Do
not revert another worker's files. Keep the release/package task blocked until my decision.
Publisher may only prepare a local package; never post to Telegram channels, social media, email
or the web. Show the real task/profile state and dependency links.
```

✓ Expected: A real Kanban board shows owners, dependencies and the human gate.

3. Research, write and approve the scenes (10 min)

PROMPT — PASTE INTO HERMES LEAD CHAT

```
Dispatch the researcher to extract approved launch facts and source IDs from the Day 1 office pack
into outputs/lab04/research.md. Scriptwriter writes three five-second scenes into storyboard.md.
Pause for my exact-copy approval. No health, halal or unsupported market claims. Use only approved
product facts and supplied/licensed assets.
```

✓ Expected: Research and storyboard files exist. Human checks the scene copy before production.

4. Render a real video (10 min)

The producer inspects and adapts the supplied local renderer to the approved copy, then runs it. No paid video API is required. The real output is the MP4, not a tool-success message.

TERMINAL

```
python3 tools/render_launch_video.py --out outputs/lab04/video
ffprobe -v error -show_entries stream=width,height -show_entries format=duration -of json
outputs/lab04/video/final.mp4
```

PROMPT — PASTE INTO HERMES LEAD CHAT

```
My reviewed storyboard is approved for local production. Dispatch the producer to adapt the
reviewed render_launch_video.py scene copy and create outputs/lab04/video/final.mp4. Preserve the
verified facts. Save the render command and metadata; do not advance to release before audit and
my decision.
```

✓ Expected: A playable MP4 exists, 1080x1920, approximately 15 seconds, with saved metadata.

5. Audit, revise and keep the release gate visible (10 min)

PROMPT — PASTE INTO HERMES LEAD CHAT

```
Dispatch the independent auditor to inspect every scene and the real ffprobe output. Check facts,
brand, readability, duration, dimensions and rights. Save audit-report.md with evidence. I will
watch the whole cut and request one correction. Re-render and re-audit it. Keep release blocked
until my exact-version ACCEPT. Publisher then creates only release-package.md with file hash and
audit reference; no external posting.
```

✓ Expected: Independent evidence, one corrected defect or human-directed revision, and a human-reviewed local release pack.

6. Capture evidence and reflect (5 min)

Take one screenshot of the actual Kanban board showing multiple assigned profiles, a dependency and the human release gate. This supports PP Task 2; read the actual candidate paper for the written analysis requirements. Save source artifacts as supporting working files.

PROMPT — PASTE INTO HERMES LEAD CHAT

```
Summarise the real profile/task state, artifact paths, human decision and what failed or needed
correction. Compare team coordination effort with Day 1's single agent. Do not mark blocked or
unfinished tasks as completed.
```

✓ Expected: PP evidence is from a real board; limitations are accurately stated.

Verification / checkpoint

- □ Actual profiles and assigned Kanban tasks are visible
- □ Dependencies block downstream work and the human gate controls local release
- □ A playable 15-second 1080x1920 video has independent audit evidence
- □ One screenshot shows the real team, dependency and human gate for PP Q2

Checkpoint: Real distinct profiles + real Kanban dependencies + playable reviewed video + visible human release gate. No external publishing.

Troubleshooting

Symptom	Fix
Only one agent acts all roles	Inspect profile/task runtime; a role-play response is not a team. Use the trainer-preflighted real profiles.
Tasks do not dispatch	Check gateway status, assigned profile, dependency state and provider access.
Video renderer fails	Inspect ffmpeg error and dependencies; a storyboard is partial work and cannot be called completed video.
Gate is bypassed	Stop dispatch, restore blocked release state and inspect whether any external action occurred.

Stretch challenge

Re-run one stage after changing the approved angle. Show which downstream artifacts become stale and require re-review.
