--- name: brand-compliance-audit description: Audit a draft post, script, video or publish package against Kopi Kaki's compliance-rules.md (C1-C10) and video-qa-checklist.md (V1-V9) and return a PASS/FAIL table with fixes. Use for any review, audit or QA step. ---

Brand compliance audit

1. Load compliance-rules.md (and video-qa-checklist.md for video).
2. For every rule, quote the exact text that passes or fails and give a one-line reason.
3. Verdict: PASS only if every rule passes. Otherwise FAIL with a numbered fix list.
4. Never fix the work yourself - return it to its owner with the fix list (Kanban: request-changes).
5. Escalate to the human if a rule is ambiguous.

Output: audit-report.md with the table, the verdict and the fix list.
