TGS-2024043854 · DAY 1 · LAB 4 · 70 MIN

Activity 4 — Hermes Dashboard, Professional PPT & Single-Agent Video

Build a Human-AI Workforce with Autonomous AI Agents · One agent + office/video skills + human review · LO2

> One Hermes agent turns the verified analysis into an interactive dashboard, a professional PPT and a short video, then sends one approved training email.

The business scenario

Kopi Kaki's launch manager needs a morning office brief, a reliable outlet-performance analysis, an interactive view for the meeting and six professional slides. All company data is fictional. Use only the trainer-assigned Google account and approved training files.

You will deliver

- outputs/lab02/dashboard.html — offline interactive filter, chart, table and CSV export
- outputs/lab02/management-brief.pptx and a reviewed PDF — six editable professional slides
- outputs/lab02/qa-report.md — checks, one correction and source-to-output trace
- ONE professional PPT screenshot for PP Task 2; skill/tool logs retained as supporting evidence
- outputs/single-video/final.mp4 — real checked single-agent video, kept separate from Day 2 team output
- outputs/lab02/test-send-log.md — exact human approval, one send ID/Sent readback or explicit block
- PP Task 1 image B: ONE Hermes-generated artifact screenshot; add to Activity 1 image A (TWO images total)

Agents: Exactly one Hermes agent; gog and Python are tools, not additional agents.
You (the human): Verify identity and calculations; choose the recommendation; review dashboard interactions and slide quality
Goal: Use a single Hermes agent with reusable skills and tools to create and verify interactive and presentation artifacts (LO2; PP Task 2).

Before you start

- Activity 3 verified analysis.xlsx, analysis.json and source notes available
- The same single Hermes profile and reviewed professional-ppt/interactive-dashboard skills are loaded
- Native Python tools and PowerPoint/PDF export were preflighted

Lab files (data/)

File	What it is
`brand-guide.md`	Brand voice, colours, platform formats

campaign-brief.md	Gula Melaka Cold Brew campaign brief (offer, KPIs, timeline)
compliance-rules.md	C1–C10 brand-safety and escalation rules
product-catalogue.csv	12 products and prices
customer-reviews.csv	60 synthetic customer reviews
sales-by-outlet.csv	Weekly sales for 12 outlets
campaign-week1-metrics.csv	Week-1 post metrics (12 posts)
skills/kopi-brand-voice/SKILL.md	Agent skill (SKILL.md)
assets/brand-palette.png	Brand image asset
assets/cold-brew-product-card.png	Brand image asset
assets/kopi-kaki-logo.png	Brand image asset
skills/gog-office/SKILL.md	Agent skill (SKILL.md)
skills/office-analytics/SKILL.md	Agent skill (SKILL.md)
skills/interactive-dashboard/SKILL.md	Agent skill (SKILL.md)
skills/professional-ppt/SKILL.md	Agent skill (SKILL.md)
skills/launch-video/SKILL.md	Agent skill (SKILL.md)
tools/office_artifacts.py	
tools/render_launch_video.py	
windows-office-setup.md	
mac-linux-office-setup.md	
approved-test-send.md	

All company data in this lab (Kopi Kaki Co., people, reviews, comments, metrics, competitors) is fictional and generated for training.

Steps

1. Build and test the dashboard (10 min)

TERMINAL

```
.office-venv/bin/python tools/office_artifacts.py dashboard --out outputs/lab02
```

PROMPT — PASTE INTO HERMES CHAT

```
Use interactive-dashboard. Inspect analysis.json and the generated dashboard.html. Adapt it into a launch-management view with an outlet selector, revenue KPI, bar chart, sortable table, CSV export and a reset control. Keep all code and synthetic aggregates embedded so it works offline. Test All outlets, one outlet, reset and CSV export. Compare the visible totals to analysis.xlsx. Record the exact tests in qa-report.md. A screenshot is not proof of interactivity.
```

✓ Expected: dashboard.html opens without a server and responds correctly to filtering, sorting, reset and CSV export.

2. Create and render the professional PPT (20 min)

TERMINAL

```
.office-venv/bin/python tools/office_artifacts.py ppt --out outputs/lab02
```

PROMPT — PASTE INTO HERMES CHAT

```
Use professional-ppt. Read the approved launch brief, analysis-notes.md, analysis.json and brand-guide.md. Create or revise outputs/lab02/management-brief.pptx into six editable slides: decision required; verified business context; outlet-performance chart; customer evidence; two options and trade-offs; recommendation and human decision. Use native shapes, an editable chart and a clear visual hierarchy. Cite source tables or review IDs in notes. Do not invent data or claims. Open or render every slide, fix clipping and check the chart totals. Save the reviewed PDF through the available PowerPoint/LibreOffice export. Record one real revision and its recheck in qa-report.md.
```

✓ Expected: Six editable slides and a visually inspected PDF. Helper output is a starter; the agent adapts the narrative and checks it.

3. Review and capture PPT evidence (10 min)

Capture ONE own professional PPT screenshot for PP Task 2. Also capture ONE Hermes-generated artifact screenshot as PP Task 1 image B; these may show the same PPT if each paper clearly identifies it. Keep actual editable files, skill/tool trace, reviewed PDF and qa-report.md. Together with Activity 1 image A, PP1 contains TWO images.

PROMPT — PASTE INTO HERMES CHAT

```
Explain which professional-ppt skill steps and tools you actually used to create this PPT. Link each figure to its source sheet or review IDs. I request one concrete visual or narrative correction. Apply it, render/open the changed slide and record the correction, actual tool calls and recheck in outputs/lab02/qa-report.md. Do not send or publish.
```

✓ Expected: The office pack tells one consistent story and preserves the human decision.

4. Create a video with ONE Hermes agent (15 min)

Use the reviewed launch-video skill and deterministic local FFmpeg tool. This is one agent using a tool, not a multi-agent team. Save separately in outputs/single-video/; keep outputs/team/ for Day 2. macOS command below; Windows uses the native .office-venv\Scripts\python.exe path.

TERMINAL

```
.office-venv/bin/python tools/render_launch_video.py --out outputs/single-video
ffprobe -v error -show_entries stream=width,height -show_entries format=duration -of json
outputs/single-video/final.mp4
```

PROMPT — PASTE INTO HERMES DESKTOP CHAT IN THE KOPI KAKI WORKSPACE

```
Use launch-video. Draft three five-second scenes from the approved brief and ask me to approve
exact scene text. Inspect the renderer, then make a local playable 15-second 1080x1920 H.264 MP4
in outputs/single-video/. Adapt a copied renderer if needed; do not claim to have used an unrun
cloud video service. Watch the full result, check all scenes and ffprobe metadata, correct one
issue and log source facts, actual tools and exact file hash in qa-report.md. No external
publishing.
```

✓ Expected: Real playable single-agent MP4, checked scenes/metadata and exact-version human decision.

5. Approve and send ONE training email (15 min)

Use data/approved-test-send.md as a separate procedure from the read-only gog-office skill. First inspect installed auth/send help. Only if the trainer has assigned a permitted test recipient and explicitly approves the exact recipient, subject, body and attachment list, reauthorize Gmail for the required write scope while preserving Calendar/Drive services, OAuth client and other existing grant settings. Complete consent in the browser. Preview the exact send, then execute it once after human approval. Do not use --readonly or --gmail-no-send on that one authorised write; restore read-only runtime policy afterwards. Verify the returned message ID and actual Sent record. A draft, CLI success text or mailbox address alone is not sent-mail evidence. If permission/recipient is missing, stop with BLOCKED rather than sending elsewhere.

PROMPT — PASTE INTO HERMES DESKTOP CHAT IN THE KOPI KAKI WORKSPACE

```
Prepare one brief training update email to the trainer-approved test recipient I supply, using the
checked meeting time and source-backed recommendation. Do not include private files or
credentials. Show exact To, Subject, Body and attachment list and wait for my explicit SEND
approval of this exact version. Use only the separately approved test-send procedure, not the
read-only gog-office skill. After approval and browser consent if needed, send once, record the
actual message ID and verify it in Sent. Record approval, result or block in outputs/lab02/test-
send-log.md. No calendar changes or public sharing.
```

✓ Expected: One approved test send verified by message ID and Sent readback, or explicit incomplete block; read-only defaults restored.

Verification / checkpoint

- □ dashboard.html is interactive offline; outlet filter, sorting, reset and exported CSV are verified
- □ management-brief.pptx has six editable slides, a checked chart and a reviewed PDF
- □ qa-report.md contains one actual correction and repeat check
- □ Single-agent MP4 plays and matches approved scenes and metadata
- □ Test email has explicit exact-content approval and real message ID/Sent readback, or is marked incomplete

- □ PP1 includes image A chosen assistant and image B Hermes artifact; PP2 shows own professional PPT

Checkpoint: Dashboard, PPT and single-agent MP4 verified; PP1 two-image evidence and PP2 PPT saved; exact test email sent and read back or marked incomplete.

Troubleshooting

Symptom	Fix
OAuth access denied	Trainer checks assigned test user, OAuth client type, enabled APIs and selected account. Do not repeatedly broaden scopes.
401/403 on one service	Record that service as unavailable; inspect its API and consent separately.
gog works in terminal but not Telegram	Gateway can have another PATH/keyring environment. Prove gog --version and assigned account access inside that runtime; restart only the training gateway if needed.
No Google access in class	Use the local training workbook for artifact practice and label Google integration incomplete; never claim successful connection.
Workbook column mismatch	Inspect actual sheet headers. Adapt calculations to source schema; never silently rename fields or infer revenue units.
No PDF renderer	Open all six slides in PowerPoint and export PDF. Mark render incomplete until actual PDF exists.

Stretch challenge

Teach Hermes a revised office-pack skill containing the checks you found useful. Start a fresh session and rebuild from the same source with a different selected outlet. Compare outputs and record what changed.
