TGS-2024043854 · DAY 2 · LAB 4 · 60 MIN

Activity 4 — Your Social Media Team: Five Bots in One Group Chat

Build a Human-AI Workforce with Autonomous AI Agents · Multiple named bots in one group chat · LO2

> One prompt to Mia hires five named bots, each with its own role file, and puts them in one group chat. Post one brief: they hand off by @mention; you approve every post.

The business scenario

You are the founder-CEO of Kopi Kaki Co., a fictional Singapore kopi startup. The Tiong Bahru flagship opens on 1 Dec 2026 with the Gula Melaka Cold Brew (SGD 6.80, #ShiokColdBrew); until then you sell at weekend pop-ups and take app pre-orders. Your team is two baristas — and the AI agents you set up in this course. Two weeks to launch. LinkedIn needs a founder story for investors and corporate catering buyers, Facebook needs the neighbourhood and the pop-up dates, Instagram needs a scroll-stopping image. One agent writing all three sounds the same everywhere, so you ask Mia to hire a team of bots for you, the same way she hires the video team in Activity 5: each specialist owns one platform, they talk in one group chat, and you approve every post before anything goes public.

You will deliver

- Five bots hired by Mia from one prompt, each with its role file as SOUL.md: Rafi (researcher), Lin (LinkedIn), Farah (Facebook), Ivy (Instagram), Pixel (images)
- A group chat 'Kopi Social Team' with all five, where they hand off by @mention and ask you (@user) for decisions
- outputs/social/research.md, linkedin.md, facebook.md, instagram.md and images/*.png
- outputs/social/gallery.html — every post shown as it would appear on its platform
- outputs/social/approval-log.md — APPROVE / EDIT / REJECT per post

Agents: 5 named bots created by Mia from one prompt, in one group chat: Rafi → Lin, Farah, Ivy → Pixel
You (the human): Post the brief, approve or edit each post; nothing is posted publicly
Goal: Design a multi-agent team of named bots with clear roles, coordinate them in a group chat with a human approval step, and compare its output and effort with a single agent (LO2).

Before you start

- Topic 2 setup done: Hermes Desktop with a working model; Telegram connected
- Activity 2 website and Activity 3 deck saved — the team reuses their facts
- This lab's data/ dragged into Desktop/kopi-kaki (souls/ holds the five role files; tools/make_post_image.py makes the images)

Lab files (data/)

File	What it is
AGENTS.md	Company rulebook: attach this folder with + → Folder… and tell Mia to follow it
brand-guide.md	Brand voice, colours, platform formats
campaign-brief.md	Gula Melaka Cold Brew campaign brief (offer, KPIs, timeline)
compliance-rules.md	C1–C10 brand-safety and escalation rules
product-catalogue.csv	12 products and prices
competitors.csv	6 fictional competitors
customer-reviews.csv	60 synthetic customer reviews
social-comments.csv	20 social comments incl. complaints, legal, PII, spam
skills/kopi-brand-voice/SKILL.md	Agent skill (SKILL.md)
assets/brand-palette.png	Brand image asset
assets/cold-brew-product-card.png	Brand image asset
assets/kopi-kaki-logo.png	Brand image asset
souls/rafi.SOUL.md	Role + rules for one studio profile
souls/lin.SOUL.md	Role + rules for one studio profile
souls/farah.SOUL.md	Role + rules for one studio profile
souls/ivy.SOUL.md	Role + rules for one studio profile
souls/pixel.SOUL.md	Role + rules for one studio profile
tools/make_post_image.py	Offline on-brand image tool (Pillow)

All company data in this lab (Kopi Kaki Co., people, reviews, comments, metrics, competitors) is fictional and generated for training.

Steps

1. Copy the team files into your company folder (3 min)

In Finder (Mac) or File Explorer (Windows), open this lab's data folder from the unzipped course files, select everything and drag it into your Desktop/kopi-kaki folder. Choose Skip (do not replace) for files that already exist. Then in Hermes Desktop click + (left of Ask anything) → Folder… and choose Desktop/kopi-kaki: Mia now has this lab's files and AGENTS.md. Start the session with: 'Read AGENTS.md in the attached folder and follow it for this session.' souls/ holds one role file per bot: who it is, what it writes and the rules it must never break.

✓ Expected: souls/ lists rafi, lin, farah, ivy and pixel .SOUL.md files.

2. One prompt: hire the social team and its group chat (12 min)

This is the prompt method you will use again for the video team in Activity 5: you describe the team; Mia creates every bot with its role file as its SOUL.md, so you never paste a role file by hand. Each new bot appears in the Bots tab and says hello in its own Bot Chat; the roster may list a bot by its title (Instagram Writer) but it still answers as Ivy. If Mia says she cannot make the group chat from chat, right-click Rafi → Manage groups → create 'Kopi Social Team' inline, then add Lin, Farah, Ivy and Pixel the same way (a group holds 2–6 bots). If a bot says it has no model, open Settings → Providers → Accounts, click that bot under 'Applies to' and sign in with ChatGPT or Codex Subscription: sign-ins are not copied to new bots.

PROMPT — PASTE INTO HERMES DESKTOP — MIA, FOLDER DESKTOP/KOPI-KAKI

```
Hire my social media team as five bots and put them in one group chat. Workspace: Desktop/kopi-kaki.
1. Create these five bots (Hermes profiles) by cloning your settings. Give each the name, title and description shown, and use its role file as its SOUL.md:
- Rafi · Market Researcher · Finds launch angles, audience insights and facts for Kopi Kaki posts; cites the source file for every fact. (role file souls/rafi.SOUL.md)
- Lin · LinkedIn Writer · Writes the founder's LinkedIn post: story, one proof point, call to action; professional Singapore English. (role file souls/lin.SOUL.md)
- Farah · Facebook Writer · Writes the neighbourhood Facebook post: pop-up dates, the 1 Dec opening, friendly kopitiam voice. (role file souls/farah.SOUL.md)
- Ivy · Instagram Writer · Writes the Instagram hook, caption and hashtags, plus a one-line image brief. (role file souls/ivy.SOUL.md)
- Pixel · Image Creator · Makes one on-brand 1080x1350 image per post and the review gallery that shows every post as it will look. (role file souls/pixel.SOUL.md)
2. Create a group chat called 'Kopi Social Team' with all five bots.
3. Ask each bot to introduce itself to the founder of Kopi Kaki Co. in two sentences.
4. Show me the team as one table: name, title, role file, in the group (yes/no). Never post anything publicly.
```

✓ Expected: A five-row table. The Bots tab lists the five bots, each with a hello in its Bot Chat, and 'Kopi Social Team · 5 bots'.

3. Meet your team (5 min)

Click each bot to open its Bot Chat and check that it answers in its own role. Then click Kopi Social Team → Open chat: the room should list all five members. In a group, your message starts up to three rounds of bot turns; bots hand work to each other with @name and ask you with @user.

PROMPT — PASTE INTO HERMES DESKTOP → BOTS TAB → RAFI (THEN LIN)

```
Hi, I'm the founder of Kopi Kaki Co. In two sentences: what is your job on my marketing team, and
which files in my Desktop/kopi-kaki folder will you read first?
```

✓ Expected: Each bot describes its own role and names AGENTS.md, campaign-brief.md and brand-guide.md.

4. Post the brief and watch them hand off (15 min)

One message briefs the whole team. Rafi researches first; the three writers start when Rafi hands off. Watch the room: who speaks, who passes, who asks you.

PROMPT — PASTE INTO HERMES DESKTOP → KOPI SOCIAL TEAM (GROUP CHAT)

```
Team, we launch the Gula Melaka Cold Brew on 1 Dec 2026. Work in Desktop/kopi-kaki and follow
AGENTS.md, brand-guide.md and compliance-rules.md.
@rafi research first: write outputs/social/research.md with 3 launch angles, the top 3 things
tasters loved (with review IDs) and 5 approved facts with their source file. Then hand off to @lin
@farah @ivy.
@lin write outputs/social/linkedin.md, @farah write outputs/social/facebook.md, @ivy write
outputs/social/instagram.md — each from research.md and your own role file.
Never post anything. If you are unsure about a fact, ask me with @user.
```

✓ Expected: research.md first, then three platform drafts; anything uncertain comes to you as an @user question.

5. Ask Pixel for the images and the gallery (8 min)

Pixel makes one image per post with the small image tool in your folder and builds one page that shows every post the way it would look on its platform.

PROMPT — PASTE INTO HERMES DESKTOP → KOPI SOCIAL TEAM

```
@pixel make one 1080x1350 image for each of linkedin.md, facebook.md and instagram.md with
tools/make_post_image.py (Python from .office-venv), save them in outputs/social/images/, then
build outputs/social/gallery.html with one card per platform and open it for me.
```

✓ Expected: gallery.html opens: three platform cards, each with its image, copy and hashtags.

6. Review like the founder: APPROVE, EDIT or REJECT (10 min)

Check every post against brand-guide.md and compliance-rules.md: price SGD 6.80, launch 1 Dec 2026, SHIOK20 terms if the code appears, no health or halal claims, no competitor bashing. Send one post back with a concrete edit.

PROMPT — PASTE INTO HERMES DESKTOP → KOPI SOCIAL TEAM

```
My decisions:
- LinkedIn: APPROVE
- Facebook: EDIT — @farah put the first pop-up date in the first line and cut the post to 80 words
- Instagram: APPROVE
@pixel when Farah is done, refresh the gallery and record every decision with today's date and my
reason in outputs/social/approval-log.md.
```

✓ Expected: Farah revises; the gallery shows the edited Facebook post; approval-log.md has three rows.

7. Reflect: team versus one agent (7 min)

Compare the bots with Mia working alone in Activities 2 and 3.

PROMPT — PASTE INTO HERMES DESKTOP → MIA (YOUR FIRST SESSION)

```
Compare today's five-bot group chat with you working alone on Day 1: time to first draft, how
different the three posts sound, number of my edits, and coordination overhead. Give me a 5-row
table and one recommendation: when should Kopi Kaki use a group of bots, and when one agent?
```

✓ Expected: A short evidence-based comparison you can discuss in class.

Verification / checkpoint

- □ Five bots hired by one prompt, each with its title and role file as SOUL.md
- □ The group 'Kopi Social Team' shows the hand-off: research → three writers → images
- □ gallery.html shows three platform posts with images
- □ approval-log.md records a decision for every post; nothing was posted publicly

Checkpoint: The group chat shows Rafi's research first, three platform drafts, Pixel's gallery, and every post in approval-log.md has your decision.

Troubleshooting

Symptom	Fix
A bot has no model	Settings → Providers → Accounts → click the bot under 'Applies to' → ChatGPT or Codex Subscription → sign in. Sign-ins are not copied to new bots.
Mia cannot create the group chat	Right-click Rafi → Manage groups → create 'Kopi Social Team' inline, then add the other four bots the same way.
A bot ignores its role	Ask Mia: 'Show me the SOUL.md of <bot>. Does it match souls/<name>.SOUL.md?' and ask her to fix it.

Nobody answers in the group	@mention the bot you want (@rafi …). A message with no mention lets each bot decide whether to speak.
The room stops after three rounds	That is the safety cap. Send a short follow-up: '@lin @farah @ivy please continue from research.md'.
Image tool fails	Ask Mia in your own session: 'Install Pillow into .office-venv in Desktop/kopi-kaki.'
A writer invents a price or promo	Reply '@<writer> use only product-catalogue.csv and campaign-brief.md' and add the rule to its role file (Edit Profile → SOUL.md).

Stretch challenge

Ask Mia to hire a sixth bot, Tash the TikTok Writer, and add her to the group and ask for a 15-second script. What did the extra specialist cost in time and review effort, and was it worth it?
