Automate the Weekly Video Pipeline with a Routine and a Board Gate

Build a Human-AI Workforce with Autonomous AI Agents · Scheduled multi-agent workflow · LO3

> Turn research → script → production → audit → publish-ready into a routine that fires every Monday at 10:00 — and still stops for your approval.

The business scenario

Goal 2 is one approved short video every week. You do not want to create the task by hand every Monday, but you also never want a video to go out unseen. You create the 'Weekly Kopi Short' routine: the clock creates the task, Ava delegates the pipeline, and the finished package waits for a Board approval.

You will deliver

- Routine 'Weekly Kopi Short' for Ava — schedule trigger every week, Monday 10:00, Asia/Singapore
- One manual Run that produced a complete package
- Publish package + video/storyboard + audit in the run's task
- A Board Approval request that you approved (or rejected) with a comment

Agents: CEO + Researcher + Copywriter + Video Producer + Auditor
You (the human): Approve each week's video before it is published
Goal: Automate a recurring multi-agent workflow while keeping a human approval gate, and assess the trade-off between autonomy and control (LO3).

Before you start

- Labs 7–8 complete: the team has delivered at least one reviewed package

Lab files (data/)

File	What it is
`paperclip-routine-weekly-kopi-short.md`	Routine spec
`campaign-brief.md`	Gula Melaka Cold Brew campaign brief (offer, KPIs, timeline)
`brand-guide.md`	Brand voice, colours, platform formats

`compliance-rules.md`	C1–C10 brand-safety and escalation rules
`video-qa-checklist.md`	V1–V9 video QA checks
`assets/brand-palette.png`	Brand image asset
`assets/cold-brew-product-card.png`	Brand image asset
`assets/kopi-kaki-logo.png`	Brand image asset

All company data in this lab (Kopi Kaki Co., people, reviews, comments, metrics, competitors) is fictional and generated for training.

Steps

1. Create the routine

Work → Routines → Create routine. Title 'Weekly Kopi Short'; For: Ava; in: ShiokColdBrew Launch (or a new project 'Weekly Content'); Advanced delivery settings → concurrency 'skip_if_active'. Paste the instructions below, then Create routine. (Without a default agent the routine stays a paused draft.)

PROMPT — PASTE INTO PAPERCLIP → ROUTINES → CREATE ROUTINE → INSTRUCTIONS

```
Produce this week's Kopi Short (research -> script -> production -> audit -> publish-ready).
Delegate: Market Researcher picks one fresh angle (cite 2 sources); Copywriter writes a 20-30
second script in the Kopi Kaki voice (kopi-brand-voice); Video Producer renders the video, or a 6-
frame storyboard if rendering is unavailable; Compliance Auditor checks compliance-rules.md (C1-
C10) and video-qa-checklist.md (V1-V9).
Deliver a publish package: title, description with AI disclosure, 3-5 hashtags incl.
#ShiokColdBrew, thumbnail, captions.
Gate: before anything is published, file a Board approval request with the package attached. Do
NOT publish. Stay within each agent's budget.
```

✓ Expected: The routine lands on its Triggers tab.

2. Add the weekly trigger

Triggers → Add trigger → 'On a schedule' → Repeat: Every week → Monday → Time 10:00 → Time zone Asia/Singapore → Add schedule. (The default repeat is Weekdays — change it.) CLI alternative:

TERMINAL

```
npx paperclipai routine list -C <company-id>
npx paperclipai routine trigger:create <routine-id> --payload-json
'{"kind":"schedule","cronExpression":"0 10 * * 1","timezone":"Asia/Singapore"}'
```

✓ Expected: Next run: Monday 10:00 SGT.

3. Test before you trust — Run it now

Click Run on the routine's header (or Run now in the list). A new task is created for Ava; follow her delegation in the task thread and in Audit → Runs.

TERMINAL

```
npx paperclipai routine run <routine-id>
npx paperclipai routine runs <routine-id> --limit 5
```

4. Board gate — approve or send back

Two gates, two strengths. (1) The Board approval request is prompt-enforced — the agents file it because the routine's instructions say so. (2) Approvers on a task are runtime-enforced, but routine-generated tasks are not guaranteed to carry them, so open the generated task and set Properties → Execution → Approvers → Assign to me every week. Then Dashboard → Pending Approvals → 'Board Approval' card: watch the video (or storyboard), read the audit, Approve, Reject or Request revision — and say why in Comments.

5. Tune the autonomy

Decide what may run without you each week (research, script, audit) and what must stop for you (publishing, any price or promo change). Add it as a rule to Ava's AGENTS.md so next Monday's run follows it.

Verification / checkpoint

- □ Routine active with a weekly Monday 10:00 Asia/Singapore trigger
- □ Manual run created a task and completed the pipeline
- □ The generated task shows you as Approver
- □ A Board Approval request decided by you with a comment

Checkpoint: A manual Run produced a full package and a Board Approval request; the routine shows a weekly Monday 10:00 Asia/Singapore trigger.

Troubleshooting

Symptom	Fix
Routine is a paused draft	Set a default agent (For: Ava) — the automation toggle needs one.
Sub-tasks not created	Ava may be paused or over budget — check Audit → Budgets; raise the cap or wait.
No approval request appeared	Agents follow the instructions — make the 'file a Board approval request' line explicit, and set yourself as Approver on the task.
Wrong time	Edit the trigger's time zone to Asia/Singapore.

Stretch challenge

Add a second trigger: a webhook that starts the pipeline when a competitor launches a product. What new risks does an event-driven trigger add, and what gate would you add?
