TGS-2024043854 · DAY 1 · LAB 2 · 45 MIN

Activity 2 — UX Skills from skills.sh Build the Kopi Kaki Website

Build a Human-AI Workforce with Autonomous AI Agents · One agent + installed UX skills · LO2

> A startup without a website does not exist. Install two UX skills from skills.sh and let Mia design, build and test your one-page site in 45 minutes.

The business scenario

You are the founder-CEO of Kopi Kaki Co., a fictional Singapore kopi startup. The Tiong Bahru flagship opens on 1 Dec 2026 with the Gula Melaka Cold Brew (SGD 6.80, #ShiokColdBrew); until then you sell at weekend pop-ups and take app pre-orders. Your team is two baristas — and the AI agents you set up in this course. Customers who taste the cold brew at a pop-up search for you that evening — and find nothing. You need a one-page site before the flagship opens: hero, menu, the 1 Dec launch, pop-up locations and an app pre-order button. You have no designer, so you install design skills and brief Mia like an agency.

You will deliver

- outputs/website/index.html — responsive one-page Kopi Kaki site (hero, menu, launch, pop-ups, pre-order CTA)
- outputs/website/review.md — your design review: what the skill changed, what you corrected
- Two screenshots: desktop and mobile widths

Agents: 1 Hermes agent (Mia) with UX skills from skills.sh
You (the human): Brief the site, review the design against the brand guide, request one revision
Goal: Install third-party UX skills after reviewing their source, use them to brief a single agent, and judge the result against the brand guide (LO2).

Before you start

- Topic 2 setup done: Mia works in ~/kopi-kaki
- Node.js 22.20+ for the skills CLI (`node --version`)
- This lab's data/ copied into ~/kopi-kaki

Lab files (data/)

File	What it is
`AGENTS.md`	Company context Hermes loads automatically
`brand-guide.md`	Brand voice, colours, platform formats

`campaign-brief.md`	Gula Melaka Cold Brew campaign brief (offer, KPIs, timeline)
`compliance-rules.md`	C1–C10 brand-safety and escalation rules
`product-catalogue.csv`	12 products and prices
`assets/brand-palette.png`	Brand image asset
`assets/cold-brew-product-card.png`	Brand image asset
`assets/kopi-kaki-logo.png`	Brand image asset
`website-brief.md`	One-page website brief

All company data in this lab (Kopi Kaki Co., people, reviews, comments, metrics, competitors) is fictional and generated for training.

Steps

1. Copy the website brief (2 min)

The brief says who the site is for, the sections, the brand and the definition of done.

TERMINAL

```
cp -Rn data/* ~/kopi-kaki/
mkdir -p ~/kopi-kaki/outputs/website
cat ~/kopi-kaki/website-brief.md
```

2. Choose UX skills on skills.sh (5 min)

Open skills.sh and search 'frontend' and 'design'. The most installed design skills include Anthropic's frontend-design (about 1.1 million installs), Vercel's web-design-guidelines and ui-ux-pro-max. Open each skill's page and read its SKILL.md: what will it make the agent do, and does it run any scripts?

TERMINAL

```
# Browse: https://skills.sh/  (search: frontend, design)
hermes skills search design --source skills-sh
```

✓ Expected: You can explain in one sentence what each skill changes.

3. Install two UX skills into Hermes (5 min)

The skills.sh command-line tool installs straight into Hermes with -a hermes-agent (-g = for your user, into ~/.hermes/skills).

TERMINAL

```
npx skills add https://github.com/anthropics/skills --skill frontend-design -a hermes-agent -g
npx skills add https://github.com/vercel-labs/agent-skills --skill web-design-guidelines -a
hermes-agent -g
hermes skills list | grep -i -E 'frontend-design|web-design'
```

✓ Expected: Both skills appear in hermes skills list.

4. Brief Mia like a design agency (15 min)

Start a new Desktop chat in ~/kopi-kaki so the new skills load.

PROMPT — PASTE INTO HERMES DESKTOP — MIA, FOLDER ~/KOPI-KAKI

```
Use the frontend-design and web-design-guidelines skills. Build the Kopi Kaki Co. one-page website
from website-brief.md.
- Sections: hero (Gula Melaka Cold Brew, SGD 6.80, from 1 Dec 2026), our story (a startup founded
in 2026), menu from product-catalogue.csv, pop-ups and the Tiong Bahru flagship, three short
taster quotes from customer-reviews.csv (no names), app pre-order button, footer.
- Brand: colours and voice from brand-guide.md; use assets/kopi-kaki-logo.png and assets/cold-
brew-product-card.png.
- One self-contained outputs/website/index.html: inline CSS, no external libraries or fonts,
responsive down to 375 px, accessible contrast.
- No health or halal claims. Every price and date must match the source files.
When done, list which skill rules you applied and every fact with its source file.
```

✓ Expected: outputs/website/index.html and a list of applied rules and sourced facts.

5. Open it and check it like a customer (5 min)

Open the page, then narrow the browser to phone width (or use the browser's device view). Check the price, the date, the pop-up information and the button.

TERMINAL

```
open ~/kopi-kaki/outputs/website/index.html      # Windows: start  ·  Linux: xdg-open
```

6. Ask for one concrete revision (8 min)

Give feedback an agent can test, not 'make it nicer'.

PROMPT — PASTE INTO HERMES DESKTOP — MIA

```
Revise outputs/website/index.html: (1) move the pre-order button into the hero, visible without
scrolling on a 375 px phone; (2) make the menu a two-column grid on desktop and one column on
phone; (3) add the pop-up dates as a simple list. Then write outputs/website/review.md: what the
skills changed, my requested fixes, and the checks you ran.
```

✓ Expected: Updated page and review.md.

7. Capture your website (2 min)

Save two screenshots — desktop and phone width — into outputs/website/. You will reuse the site's facts in the pitch deck and the social posts.

Verification / checkpoint

- □ Two UX skills installed and listed
- □ index.html opens offline with the Kopi Kaki colours, logo and product card
- □ Every price and date matches the source files
- □ Works at 375 px; review.md records your revision

Checkpoint: index.html opens offline, uses the Kopi Kaki colours and facts, works at phone width, and review.md records your one requested change.

Troubleshooting

Symptom	Fix
`npx skills` fails	Install Node.js 22.20+ and retry; or use `hermes skills install skills-sh/anthropics/skills/frontend-design`.
Skill not used	Start a new chat so newly installed skills load; name the skill in the prompt.
Images missing	Check assets/ was copied into ~/kopi-kaki and the paths in index.html are relative.

Stretch challenge

Install ui-ux-pro-max as a third skill and ask Mia for a second design. Which design would you ship, and what did the extra skill actually change?
